

Exercise 2

Classification

In this exercise, you are required to implement a machine learning model to classify the different types of data mentioned in the Kaggle link below. You must choose the correct feature or features that can be categorized. (You are free to choose the model.)

Finally, upload your Jupyter Notebook (.ipynb) file to the site. Good luck!

It is okay to not reach the correct accuracy, but you should try your best.

DATASET: [School Database: Comprehensive Educational Data](#)

(This dataset provides a comprehensive snapshot of an educational institution's ecosystem, encompassing students, teachers, subjects, and academic performance. Designed to enhance data management and facilitate efficient information retrieval, the dataset highlights the structure of a well-organized relational database for a school. Each table in the dataset plays a crucial role in capturing and connecting key elements within the educational landscape.)
